

AMAN HAJARE

Python Backend Developer

📞 +91 9302914757 | ✉️ pawaraman211@gmail.com

📍 Indore, India | 🔗 <https://github.com/aman-hajare>

CAREER SUMMARY

Motivated Python Backend Developer with strong knowledge of core Python internals, FastAPI, and Django for building scalable and high-performance APIs. Experienced in implementing JWT authentication, role-based access control, multi-tenant architectures, and PostgreSQL query optimization. Focused on writing clean, secure, and production-ready backend systems. Passionate about continuous learning and modern backend technologies.

EDUCATION

Bachelor of Technology (AI & Data Science)

Prestige Institute of Engineering, Indore — 2026

Higher Secondary (PCM)

MPBSE — 2022

TECHNICAL SKILLS

Programming: Python (Core & Advanced), SQL

Backend Development: FastAPI, Django, Django REST Framework, JWT, AsyncIO

Databases: MySQL, PostgreSQL

Caching & Performance: Redis

DevOps & Tools: Docker, Git, GitHub, Postman, CI/CD, AWS EC2

PROJECTS

TaskFlow AI – Multi-Tenant Task Management SaaS Platform

Tech Stack: FastAPI, PostgreSQL, Redis, Docker

- Built RESTful backend APIs for a multi-tenant task management system with data isolation using `company_id`.
- Implemented JWT authentication and role-based access control (Admin, Manager, Employee).
- Designed scalable architecture using Service Layer and Repository Pattern.

- Developed PostgreSQL schema with optimized queries and transaction handling.
 - Integrated Redis for caching and rate limiting to enhance performance and security.
 - Implemented background task processing using Celery with Redis.
 - Built real-time notification system using WebSockets.
 - Added activity and audit logging for tracking user actions.
 - Implemented scheduled jobs using Celery Beat for automation.
 - Developed AI-based features like task prioritization and workload balancing.
 - Containerized the application using Docker and Docker Compose.
 - Added centralized exception handling, structured logging, and API documentation.
-

CivicEye – Role-Based Smart City Issue Reporting System

Tech Stack: Python, Django, Django REST Framework, WebSockets, MySQL

- Developed backend APIs using Django REST Framework for issue reporting and management.
 - Implemented JWT authentication and multi-role access (Admin, Worker, User).
 - Added real-time updates using WebSockets for live notifications.
 - Applied geo-location filtering and priority scoring logic.
 - Focused on clean API design and scalable backend architecture.
-
