

AMAN HAJARE

Python Backend Developer

✉ pawaraman211@gmail.com ☎ +91 930-291-4757 📍 Indore, India 🔗 github.com/aman-hajare

CAREER SUMMARY

Motivated Python Backend Developer with strong knowledge of core Python internals, FastAPI, and Django for building scalable APIs. Experienced in implementing JWT authentication, role-based access control (RBAC), multi-tenant architectures, and MySQL query optimization. Dedicated to writing clean, secure, production-ready systems and continuously mastering modern backend technologies.

EDUCATION

Bachelor of Technology in AI and Data Science, 2026
Prestige Institute of Engineering, Indore Indore, India

Higher Secondary (PCM), MPBSE 2022

TECHNICAL SKILLS

Backend Frameworks

- FastAPI
- Django
- Django REST Framework (DRF)
- AsyncIO

DevOps & Tools

- Docker
- Redis
- Git
- GitHub
- Postman
- CI/CD
- Celery
- AWS EC2(Basic)

Languages & Databases

- Python (Core & Advanced)
- SQL
- MySQL
- PostgreSQL

Architecture & Security

- JWT
- RBAC
- Multi-Tenant Architecture
- WebSockets

HOBBIES & INTERESTS

- Exploring Backend Architectures
- Cricket
- Music

PROJECTS

TaskFlow AI, Multi-Tenant Task Management SaaS Platform

- Built a production-grade multi-tenant SaaS backend with strict data isolation using company_id and a scalable Service-Repository architecture.
- Implemented JWT-based authentication, Role-Based Access Control (RBAC), and secure API access with rate limiting via Redis (SlowAPI).
- Designed an event-driven architecture using a custom Event Bus to decouple business logic and trigger asynchronous workflows.
- Integrated Celery with Redis for background processing, including email notifications and distributed task scheduling via Celery Beat.

- Developed a real-time notification system using WebSockets for instant user updates without polling.
- Implemented Redis caching to optimize API performance and significantly reduce database load.
- Built AI-powered features for task priority prediction, tag generation, workload balancing, and risk analysis.
- Designed comprehensive activity and audit logging systems to track user actions and sensitive operations.
- Containerized the entire system (FastAPI, PostgreSQL, Redis, Celery Worker & Beat) using Docker for production-ready deployment.
- Implemented centralized exception handling, structured logging, and production-ready OpenAPI documentation.

CivicEye, *Role-Based Smart City Issue Reporting System*

- Developed scalable backend APIs using Django REST Framework (DRF) for smart city issue management with JWT-based authentication and role-based access control (Admin, Worker, User).
- Implemented a real-time, event-driven notification system using Django Channels and WebSockets for instant issue updates.
- Integrated AI-based image validation using a pre-trained deep learning model to detect and prevent spam or irrelevant issue submissions.
- Designed geolocation-based filtering using latitude–longitude coordinates and the Haversine algorithm for nearby issue detection.
- Built dynamic priority scoring and intelligent issue workflows to optimize task assignment and resolution efficiency.
